The first version of AutoCAD was released in 1982, with the second version adding a Windows interface in 1988. Over the years, other operating systems have been added (e.g. Mac, Unix, Linux, etc.) AutoCAD introduced the concept of Dynamic Input which allows users to be productive on any drawing file format from their previous CADD experience. In 2011, AutoCAD LT was launched with less than 30% of the features of AutoCAD, and only 4% of the price. Key Features: Autodesk SketchUp lets you virtually explore, model, and share 3D ideas. Commands that allow for automation of AutoCAD's functionality are grouped into AutoLISP and Visual LISP and VBA. Other languages, such as C#, C++, Visual Basic.NET, and a few others, have also been made available by Autodesk. These languages are used to extend AutoCAD or create stand-alone applications. Visual LISP AutoCAD has built-in support for Visual LISP, an application programming interface and extension language that automates some of the functionality of AutoCAD, mainly drawing. It supports creating, inserting, and modifying symbols, and using AutoCAD's commands. Since 2008, Visual LISP was incorporated into AutoCAD as standard. The Visual LISP functionality in AutoCAD is implemented as an extension for AutoLISP. Visual LISP runs as a separate process and it can be used in a command window of AutoCAD. Visual LISP includes many other features, as well as a set of LISP language macros. Visual LISP also supports operators that allow the extension to support custom math functions. In 2008, Visual LISP received a Certified on AutoLISP basis. AutoLISP AutoCAD's LISP programming language was introduced in AutoCAD 2000. LISP, or a variant thereof, is an application programming interface and an extension language that extends the functionality of AutoCAD. AutoLISP is based on Lisp, and was introduced to let users extend AutoCAD. One of the main advantages of AutoLISP was that it allowed drawing functionality to be connected to many other programming languages, and other programs. AutoLISP is similar to Visual LISP, but is implemented in a different way. Both languages were initially not native to AutoCAD, but are now native. AutoLISP and Visual LISP are developed by the AutoCAD team and were historically part of AutoCAD. In 2008, AutoLISP received a Certified on AutoLISP basis. VBA Visual Basic for Applications (VBA) is another language that can be used to automate AutoCAD. VBA is also an application programming interface and an extension language. VBA allows programmers to automate tasks in Word, Excel, Outlook, and other programs. VBA was originally developed for use with Microsoft Office, but is now available on other 5b5f913d15
