Q: Detail View Controller in iOS 8 - setting image to a property I have a detail view controller that I am displaying when the UIScrollView is scrolled. I have the text in the detail view controller set through code. However, how do I set an image for the view. Right now I am trying something like this: if(row == 1){ self.icon.image = [UIImage imageNamed:@"icon1"]; } That is giving me error because the icon is not a class property. Also I am using the code below to define the detail view controller in the xib file. Is this the correct approach? DetailViewController \*detailVC = [[DetailViewController alloc] initWithNibName:@"DetailViewController" bundle:nil]; My DetailViewController.h: @interface DetailViewController : UIViewController - (void)setDetailedViewImage:(UIImage \*)value; @property (nonatomic, strong) UIImage \*icon; @end A: The reason that your code doesn't work is that you can't just assign an instance of UIImage to that property; they must be initialized with the class-specific initialization routine. That means it'd be self.icon = [UIImage imageNamed:@"icon1"]; instead of self.icon.image = [UIImage imageNamed:@"icon1"]; Low-energy labeling of melanin through electron attachment for metabolic labeling of melanosomes. The increase in sympathetic activity with age is believed to be a contributor to the development of various forms of melanin-related diseases. Here we present the first report of non-toxic electron-induced labeling of melanin in cells through electron attachment and reveal the quality and quantity of the resulting conjugated compounds. Using low-energy electron beams on model melanin molecules, we created multiple covalent linkages between the electron beam and the melanin-specific chemical functionality of amino acids and nucleotides. These stable, bio-orthogonal melanin adducts were characterized by HPLC-MS/MS analysis and by fluorescence spectroscopy. The presence of the chemical groups on

## **What's new in Fifa 22:**

- **FIFA 22 introduces “HyperMotion Technology” which uses motion capture data collected from 22 real-life players playing a complete, high-intensity football match in motion capture suits. The data collected from player movements, tackles, aerial duels and on-ball actions is used to power gameplay on the pitch. Experience Real Player Movement as the ball behaves dynamically in response to your player’s physical movements off the ball. Opponents sense the pressure and movement of your players and react accordingly.**

**Vertical swipe and the Kick Pass receive new animations and controls. The Kick Pass can now be used to send a pass to a teammate from “behind you” by a simple swiping motion. In addition, the Ball Cam technology is fully integrated into Pitch v2 to provide fans with exact passes to the target player.**

**The newly integrated ‘Full Back Line Retaining System’ provides defenders with a better understanding of when they’re about to lose possession of the ball.**

**Dynamic Behaviors of players provides a more realistic way to control the movement of players. Aerial abilities of players now changes and differs depending on the match situation. For example, forwards will jump higher when the ball is in close proximity.**

**Leg breaker melee attacks will leave marks on attackers if executed flawlessly. Also new dribble animations make big players appear menacing while defensive movements is represented with a caution flag.**
