Photoshop is a huge program and is one of the most powerful and versatile of all the image-editing tools. If you have a need for even the most basic of image editing, Photoshop may be overkill. However, if you really want to get creative, then you can find a solution here.

Reading text effectively Reading text isn't difficult but it doesn't come naturally to most computer users. Text is more complex than graphics and the process involves reading not only the letters but also the punctuation marks that can turn a sentence or paragraph into something dramatic. You see this in newspaper articles and comic strips. The following are some points to remember when reading text in Photoshop: Always read text as a whole. You may even read one word or sentence at a time. It's much easier to see an image whole than to be able to compare one word at a time. The line of text should read as a single unit. It's not always possible to read it that way, but if you've ever seen the movie or read a book where a scene spans two or more pages, the way the words are displayed on the page makes reading a definite challenge. Consider using a different font or size than the default font. A font is the symbol — like "o" or "i" — that you actually see on your screen. The default font of your operating system is usually something like Times New Roman, but you can change your default font. The font most often associated with Photoshop is Garamond, which you can change from the Tools panel's Font drop-down menu. Chapter 4 helps you make your selections. Use the Options bar to change the font and size of text. You can use the Font Size and Indents options to change the font and text size, and see Chapter 4 for more information. Understand the use of typography. Typography is the study and manipulation of types of characters, the different styles and sizes used in printing text. The way text is displayed on the printed page is dependent on how the typeface is formed. A serif typeface has the serifs (little bumps) at the end of each letter like in Times New Roman. The "i" in the word "typeface" is serif. Examples of sans serif typefaces are Comic Sans and Helvetica. The way type is displayed on the screen is determined by the display monitor. Even though you may be using a typeface that looks

Evaluation of anticancer drug resistance by inducing differentiation to antitumorigenic cell lines. A new in vitro test system for detection of anticancer drugs which induce differentiation to antitumorigenic cell lines has been developed. Cells which are resistant to antitumorigenic differentiation responses were induced to differentiate in the presence of the drug of interest, and the degree of differentiation was determined by quantitation of lipid and protein content as well as a known marker of tumorigenicity, c-fos. In this system, drugs which were previously shown to induce differentiation to pluripotent, nontumorigenic cell lines were correctly identified as being cytotoxic to normal cells while drugs which were not selective for normal cells were not identified as being toxic. Further, a novel anticancer agent, N-[2-(dimethylamino)ethyl]-5-(3-bromo-2-hydroxybenzyl)-6-hydroxynaphthalen-2-amine hydrobromide, was shown to be a potent inducer of differentiation to a pluripotent, nontumorigenic cell line. This agent was also significantly less potent in inducing differentiation to the tumorigenic cell line PC-12. These results suggest that this test system may be useful for the detection of drugs which select for cells with reduced tumorigenicity as an early criterion for potential anticancer activity.

Q: Is my technique of burning Grease or soaps to start a fire logical? My mates and I are making camp and we found this weird method of starting a fire and it goes like this: Take a pot and fill it half way with water, cover it with a lid, cover the lid with heavy object and then remove the lid. Place one lit match in the pot on the bottom of the pot. Now the pot would explode and splash everything on fire and with the help of the splash, you start a huge fire. I am concerned this could be a dangerous method and especially if we are building a structure over it and with a little bit of wind, the fire could spread to the structure and burn it. What do you think about this? Is it safe to do this or it is a dangerous method? A: Your technique sounds quite reasonable. It should definitely be allowed. I didn't see anything dangerous about your method. I wonder if it was intentional, or if the other techniques used

Now that Microsoft is out of the way, it's fair to say that Apple has (nearly) won the tablet war. Sure, you can buy a lot of Android tablets these days, but for most people who are serious about using tablets, they're going to be running iOS. And, of course, because of that, the question with Apple is "When will it go down for the count?" As it turns out, the answer is, not soon enough. The iPad Mini is about to have its 2012 refresh—and that could be your last chance to get one. For those who want to use their iOS devices in car-mounted apps and perhaps have them hooked to their HDTV, you're out of luck. Apple's 5-inch "Retina" display that features high-resolution, high-pixel-count (326 pixels per inch) screens. The iPad Mini's display looks great on the iPad—it's no surprise that those bezels would be cut down to match a larger screen. But it's not very practical to use the iPad Mini in the car, much less connect it to your HDTV. Meanwhile, the iPad has already been refreshed and is now, at this moment in time, the top-selling tablet on the market. Apple has sold 65 million iPads, a figure that's largely ignored by many, and the original iPad is now the fourth-best-selling PC on the market, according to WPC, a market research firm. Rival tablets from companies like Samsung and Asus have more power, more RAM, bigger displays, and even more bells and whistles—but Apple's tablet is still the most popular. Apple has been doing this in the past. With the first generation of the iPhone—a device that didn't have an app store or any other apps aside from the App Store—Apple created a device that sold like crazy, winning both the hype and the market. Then it topped it off with the much-awaited but highly-anticipated iPad. Whether or not it will be successful in that role this year is to be determined, but the fact remains: the iPad has now won the tablet war. Apple has set the bar, and the only ones who have been left standing are the ones who can set the bar even higher. It won't be long until the iPad is the best, if not the only, tablet on the market. And when that happens, it will be the beginning
